

Expand Your Video Surveillance Capabilities

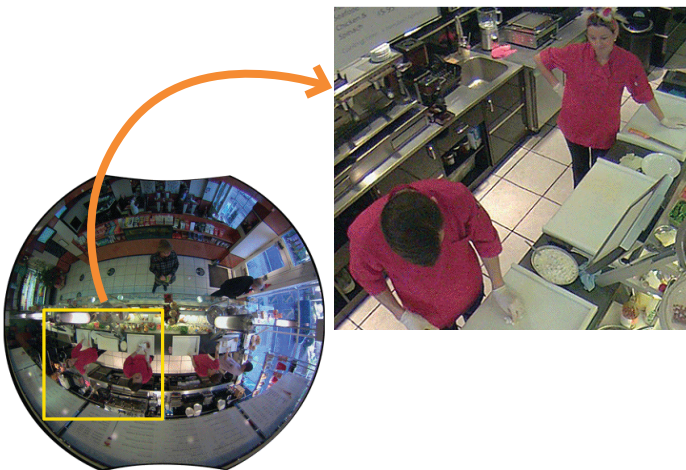

How can you effectively implement video surveillance in your facility without breaking the bank on cameras in every corner? What if you could do the reverse-cover every corner with one camera?

You can.

Pelco has introduced the Evolution Panorama IP Camera, a high resolution 5 megapixel IP device with a 360 degree view and no moving parts.

The Evolution is truly that- a complete high definition camera with a 360 degree field of view in one small device with about the same profile as a household smoke detector! Mount it on the ceiling and you can monitor an entire office, coffee shop, parking lot or classroom. Utilizing Pelco's award winning Oncam Grandeye 3D dewarping software, a preselected portion of the image can be "flattened" with amazing detail (below):

The Evolution performs extremely well in low light conditions. It's also a Wide Dynamic Range (WDR) camera. WDR cameras do a better job of recording in instances where there is darkness and bright light in the same frame, such as glass entry doors and windows. It largely eliminates the "bloom" of sunlight which many times renders an image unrecognizable.

The Evolution 5 megapixel IP camera has an outdoor option which can be put virtually anywhere utilizing corner, pole or pendant mounts. It can also be ceiling, wall or table mounted indoors. Imagine the possibilities!
